CRITICAL EVENTS IN ANAESTHETISED KIDS UNDERGOING TRACHEAL INTUBATION  
PROSPECTIVE, MULTI-CENTRE OBSERVATIONAL STUDY

**S.A.R.N.e.P.I.**

Società di Anestesia e Rianimazione  
Neonatale e Pediatrica Italiana

## WHAT IS THE CRICKET STUDY

It is a prospective observational study looking at major complications occurring during tracheal intubation in children undergoing general anaesthesia.

## WHICH PATIENTS SHOULD BE INCLUDED

Children from 0 to 16 years requiring tracheal intubation for general anaesthesia performed by the anaesthesia team are eligible for the study. During the study period all children undergoing tracheal intubation should be included. Those experiencing a critical event will be followed up.

## HOW MANY PATIENTS SHOULD BE ENROLLED

Critical events are likely rare. For this reason we will need 100,000 (one-hundred-thousand) patients included. Then 500 centres are expected to participate the CRICKET study.

## WHICH CENTRES CAN TAKE PART TO THE CRICKET STUDY

All centres doing paediatric anaesthesia are welcome to join. They can be in all five continents. CRICKET is going to be a true worldwide international study.

# HOW CAN A CENTRE JOIN THE CRICKET STUDY

If you are interested in joining the study, scan the QR-code and fill in the online form.
